## Make Your Power Connection

On your next flight you can use your laptop computer from coast-to-coast and you won't have to carry that heavy extra battery. Use Voltage Valet's Laptop In-Flight Adaptor Cable to connect your laptop's automotive adaptor/charger to the airline's onboard power system and get safe, continuous power no matter how long the flight.

The Laptop In-Flight Adaptor Cable connects the cigarette-style plug on your automotive adaptor/charger to the airline's new in-seat power socket\*. This low-voltage DC-(Direct Current)-to-DC connection provides safe, continuous power to operate your laptop or charge its battery.

**IMPORTANT:** Laptop computer battery voltages and charging rates differ so be sure to use the automotive adaptor/charger designed specifically for your laptop computer.

\*May not be available on all airline seats
